

AMIRA ERTE

Tallinn, Estonia · amiraerte.w@gmail.com · +37256868200 · <https://www.linkedin.com/in/amiraerte/>

PROFILE

I am a motivated person with experience in both backend and frontend development, having worked on medium-sized projects in a team environment. I completed a one-and-a-half-year intensive boot camp focused on real-world industry applications of computer science, gaining hands-on experience in full-stack development. I am open to learning something new, calm under pressure, value constructive feedback, and work great in a team environment.

EDUCATION

Kood/Jõhvi Jõhvi, Estonia
Degree in Specialisation of software and application development, analysis Sep 2024 - Apr 2026

EXPERIENCE

Kood/Jõhvi Jõhvi, Estonia
Mentor Nov 2025 - Nov 2025

- Mentored participants of the Kood/Empower bootcamp
- Provided guidance and support to help people navigate their studies and challenges

Kood/Jõhvi Jõhvi, Estonia
Student Council Vice President Sep 2024 - Sep 2025

- Coordinated community activities and supported fellow students day-to-day
- Planned and organised events for students
- Managed budgeting and financial record keeping

- Facilitated communication between staff and students
- Delegated tasks and tracked completion withing the team

Kood/Jõhvi 2024 - 2025
Student Representative

- Represent the educational facility alongisde Student Council peers at an outreach event
- Spoke to prospective students and the public about the school's programmes and community

SKILLS

Programming Languages: Java, JavaScript, TypeScript, Python, C++ dev, Golang, HTML/CSS, React
Technologies: Docker, VirtualBox, SQLite, Springboot
Other: Git, Postman, Visual Studio Code, IntelliJ, Gradle, Fabric API
Languages: English - Native, Russian - Native, Estonian - intermediate

PROJECTS

Real-time Multiplayer Web Game <https://github.com/AevaPlays/Game>

Developed a real-time multiplayer browser game supporting 2-4 simultaneous players, built entirely with DOM elements (no canvas). Key features include: real-time player synchronization via WebSockets, unique player naming system, lobby management with host controls, and cross-device gameplay via internet-accessible server. Implemented smooth 60 FPS animations using RequestAnimationFrame with optimized DOM rendering. Added in-game menu system (pause/resume/quit with player notifications), real-time scoreboard, game timer, keyboard controls, and sound effects. Built with TypeScript (97% of codebase) and JavaScript/HTML/CSS; frontend uses React 19 with React Router, bundled via Vite; backend runs on Node.js with Express; real-time communication handled by Socket.IO; audio powered by Howler.js; tested with Jest and linted with ESLint + Prettier.

ThreadBound (Personal Project — actively in development in my free time) Minecraft Fabric Mod <https://github.com/AevaPlays/ThreadBound>

A work-in-progress Minecraft mod being built as a personal side project. Currently adds new wool blocks, decorative plushie blocks with a custom 45° rotation placement system, and an in-game book, with plans to expand into a full bestiary that tracks mobs and discoveries, original lore, additional plushie blocks, and companion plushie mobs with unique buffs and animations. Built with Java 21 targeting the Fabric modding platform, using the Fabric API and Gradle as the build system; CI configured via GitHub Actions.
